Seattle Children's
HOSPITAL • RESEARCH • FOUNDATION

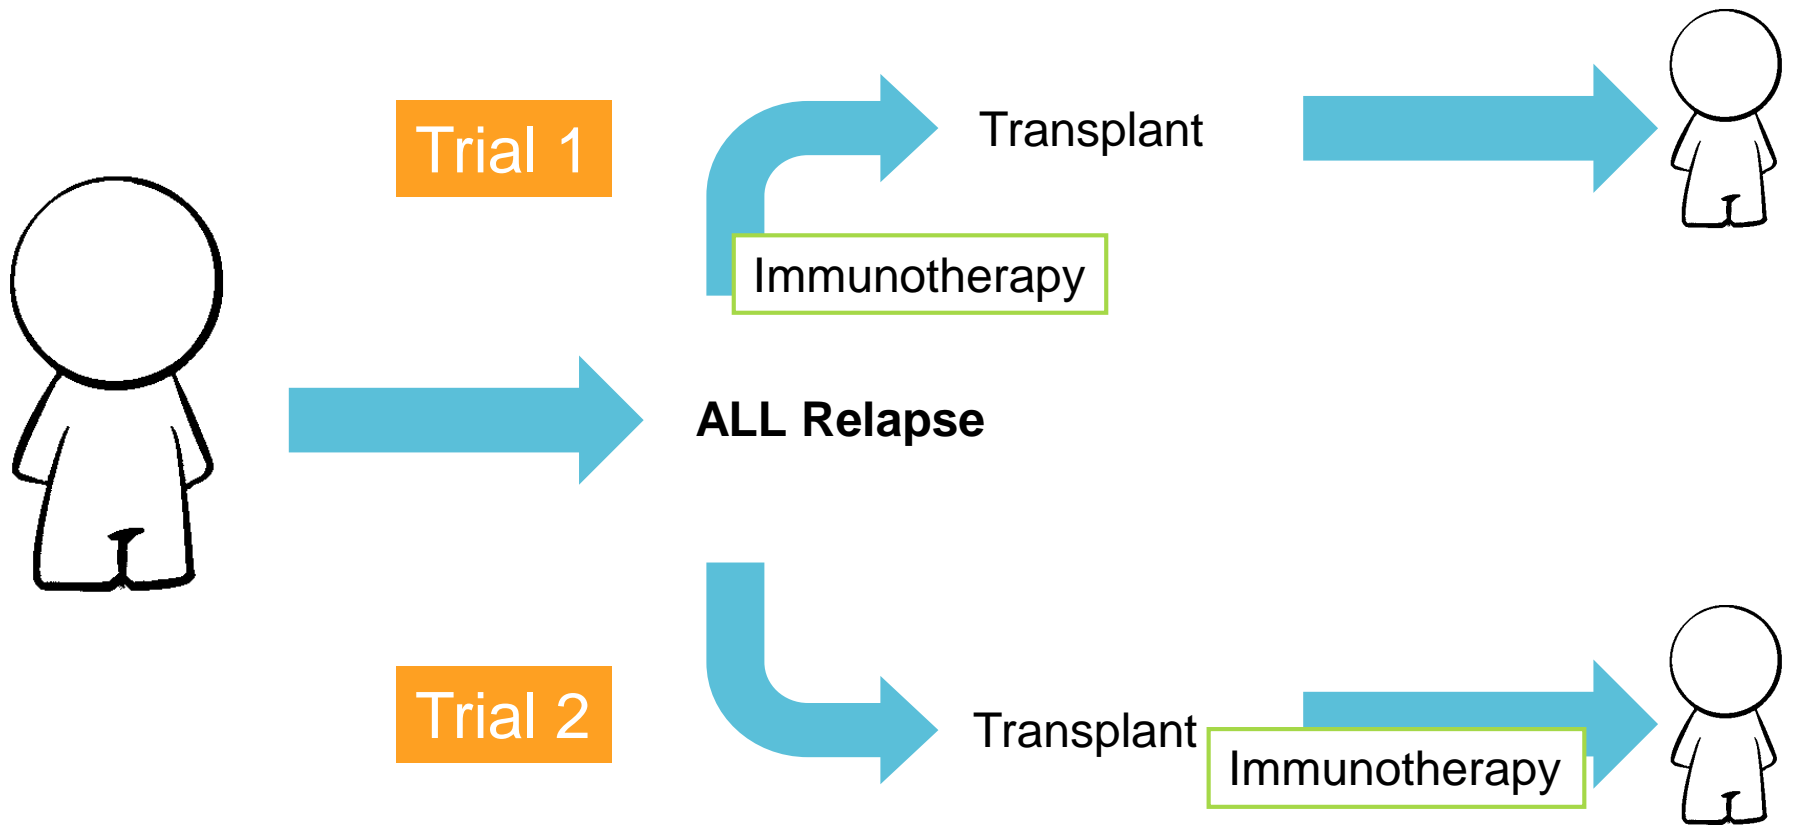

Outline

- Our T cell immunotherapy trials
- Merging cross-laboratory data into LabKey
- Looking back and moving forward

Cellular immunotherapy in cancer

Immunotherapy trials targeting pediatric ALL

ALL= Acute lymphoid leukemia

What makes a successful engineered T cell

- Cell characteristics pre-modification 
 - Last chemotherapy treatment
 - Type of drug
 - Cells before and after transplant
- Characteristics of genetically modified cells 
 - Cell markers that make them better “killers”
 - Differentiation
 - Memory phenotype
 - Proliferative potential
 - Function
- Persistence of engineered T cells 
 - How long is long enough to gain complete long term remission?

Multidisciplinary data collection

● Correlative studies laboratory

- Flow
- qPCR
- Cellular assays
- Luminex
- Deep sequencing

● Clinical team

- Clinical report forms

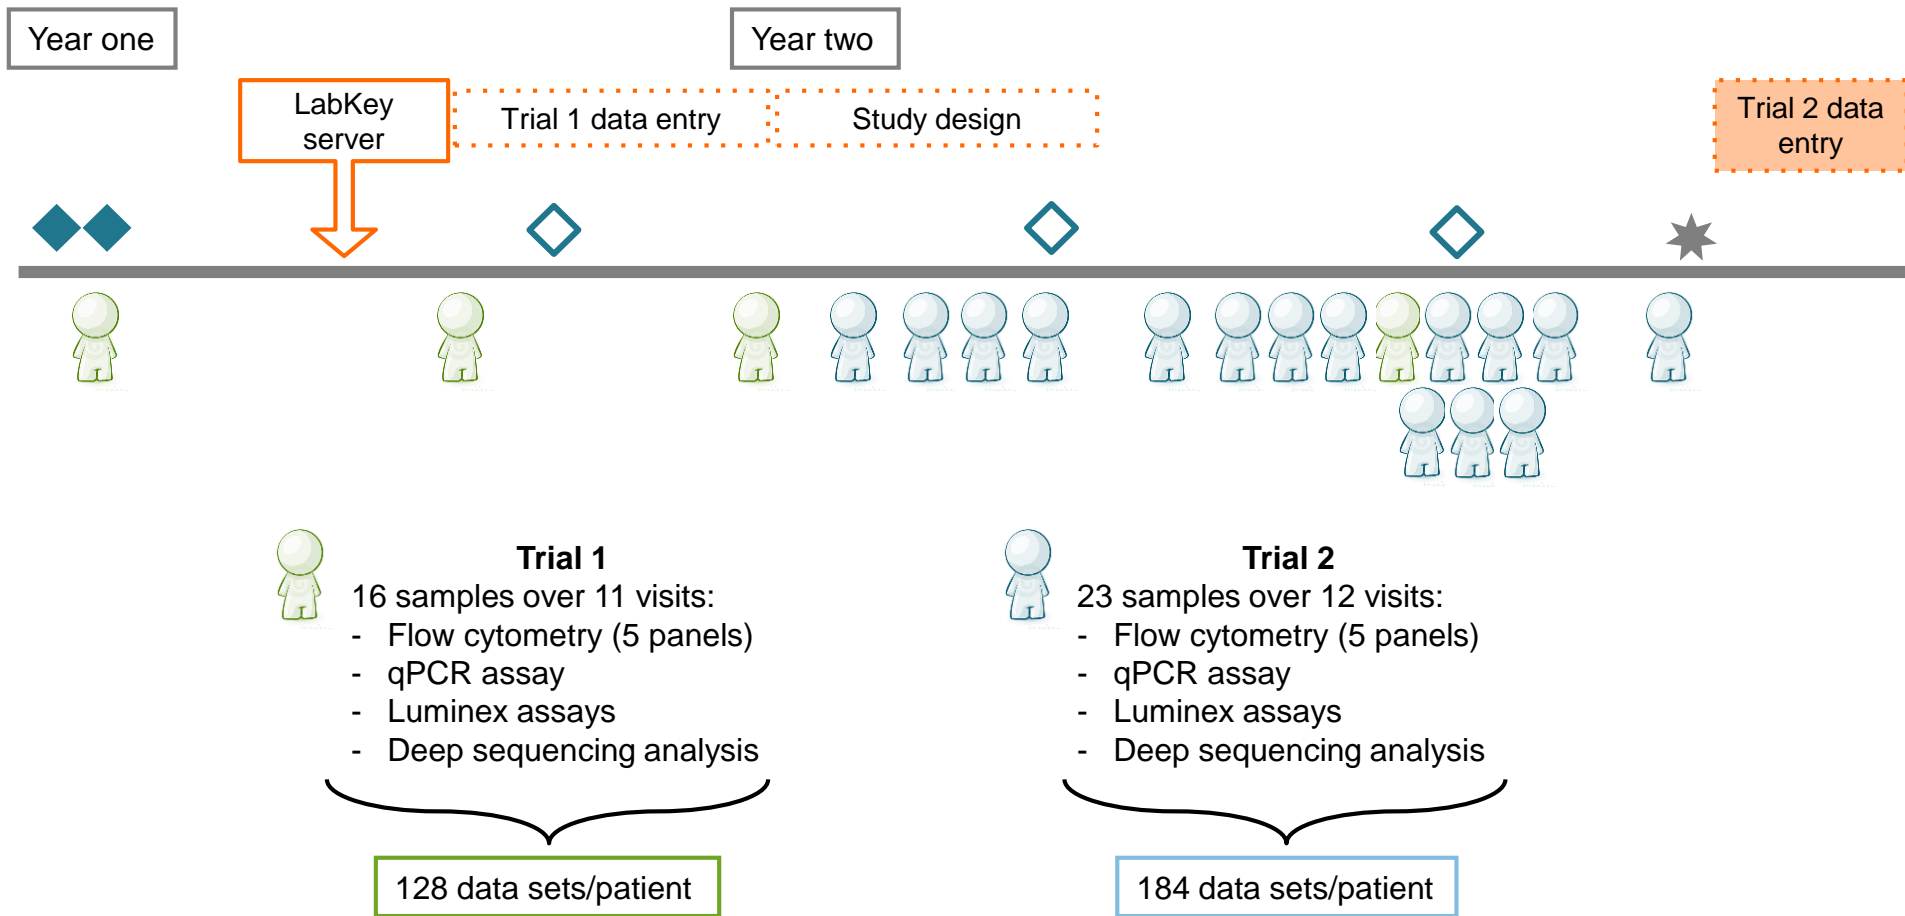

● Cell production core

- Manufacturing
- Cell growth curves
- Release testing assays

LabKey

Demand for LabKey continues to grow

Outline

- Our T cell immunotherapy trials
- Merging cross-laboratory data into LabKey
 - Data management
 - Non-assay data
 - Assay data
 - Push to study
- Looking back and moving forward

Data management

- Clinical data
 - Clinical report forms (CRFs) entered into software designed to capture patient information (DatStat)
- Cell product data
 - Paper based
- Assay data
 - Shared drives (tabular data, flow files, luminex files)
- Specimen data
 - Specimen repository software (FreezerPro)

Outline

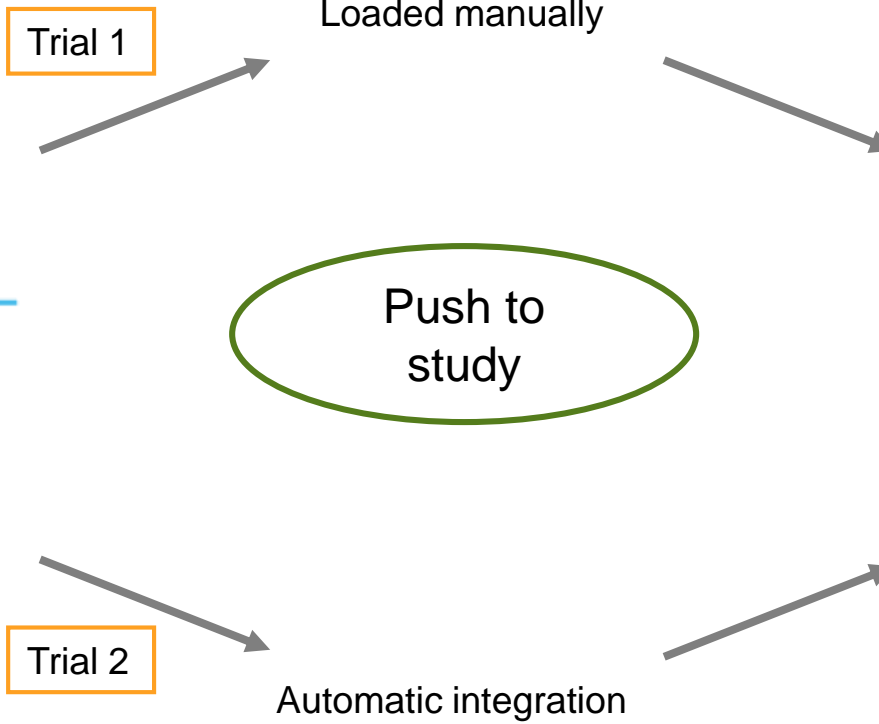

- Our T cell immunotherapy trials
- **Merging cross-laboratory data into LabKey**
 - Data management
 - **Non-assay data**
 - Assay data
 - Push to study
- Looking back and moving forward

CRF tables can be challenging to work with

Good structure: one row per patient per visit, information easy to access

HE WBC VALUE	HE RBC VALUE	HE HEMO VALUE	HE HEMA VALUE	HE PLATE VALUE	HE ANC VALUE	HE POLYS VALUE	HE LYMPHO VALUE	HE MONO VALUE	HE EOSIN VALUE	HE BASO VALUE	HE BLASTS VALUE	HE OTHER VALUE
2.5	3.48	11.4	33.7	74	875	600	1575	0	50	0	0	275
0.6	3.8	10.9	34.4	82	168	138	360	48	12	0	0	30
1.2	3.73	10.9	33.8	139	520	360	660	0	0	0	0	180
1.8	3.61	10.6	34.1	149	792	576	774	234	0	0	0	216
3.3	3.97	12.2	38.4	104	1172	1172	1030	970	50	30	0	50
2.2	3.12	10.2	30.5	77	689	689	1379	51	20	31	0	
1.7	3.74	10.4	32.7	116	1564	1224	68	17	0	17	0	340
1.4	3.4	9.7	29.5	144	1232	1162	70	28	70	0	0	70

Bad structure: 900 column table, multiple visits per row

AE DESCRIPTION 1	AE SAE 1	AE START DATE 1	AE STOP DATE 1	AE CON MED 1	AE RELATION TCELL 1	AE GRADE 1	AE OUTCOME 1	AE OUTCOME SPECIFY 1	AE DESCRIPTION 2	AE SAE 2	AE START DATE 2	...
Anemia	0	2013-06-19	2013-06-20	1	1	3	1		Anemia	0	2013-06-20	
Fever	0	2013-09-25	2013-09-25	1	1	3	1		White blood cell decreased	0	2013-09-25	

Solutions:

- Transform tables to one row per visit
 - Trial 1: after import
 - Trial 2: before import

Remaining problems:

- Repetitive data
- Comments section includes valuable data
- Design CRFs with LabKey in mind

Pre- and post-clinical cellular information

Cell production core:

- GMP facility
- Auditable by FDA
 - Maintain paper records

Correlative studies:

- Cell processing recorded real-time
 - Maintain paper records

Coping with paper-based systems

Problems:

- Not ideal for storage
- Error prone
- Not systematic

Solution:

- Create surveys
 - Pre-clinical cell manufacturing
 - Post-clinical cell processing

The screenshot shows a web-based survey form titled "PLATsummaryResults". The form is part of a larger system with navigation tabs for "Messages", "Portal", and "Exp". The form fields are as follows:

Field Name	Value
Survey Label*	Pt1
Trial	2
Date	2014-10-13
Sample Type	PB
Visit	D7
Day of Processing	2014-10-13
Cell count (ALC)	200
Cells collected (x10 ⁶)	27.3
Cells for Flow (x10 ⁶)	3
Cells for gDNA (x10 ⁶)	3
Cells for Cryopreservation (x10 ⁶)	21.3
CAR1	<input checked="" type="checkbox"/>
CAR2	<input checked="" type="checkbox"/>
CAR3	<input checked="" type="checkbox"/>
CAR4	<input checked="" type="checkbox"/>
Lineage	<input checked="" type="checkbox"/>
CSF	<input checked="" type="checkbox"/>

At the bottom of the form, there are two buttons: "SAVE" and "SUBMIT COMPLETED FORM". Below the "SAVE" button, the text "Responses automatically" is partially visible.

Organizing .fcs files is a bottleneck

- Import data to individual folders
 - One panel per folder
 - Trial 1: 300+ .wsp files
 - Trial 2: 75+ .wsp files
- Create metadata
- Quality control

The screenshot displays a file explorer window showing a directory structure for 'Flow-CAR1'. The directory is organized into a sub-directory '@files', which contains numerous folders representing individual flow cytometry runs. Each folder name includes a date, a sample ID, and a run ID, such as '2013-10-02 13835_CS_S01 BATCH'. The 'Flow Summary' panel on the right provides a high-level overview of the data, including the total number of FCS files, analyses, compensation matrices, and samples. It also breaks down the analysis folders into 'Clinical Flow' and further into specific sample and run counts.

Adapting ICS metadata for FMO controls

All stain

subtract

FMO control

= true T cell population

Background and Foreground Match Columns

Select the columns that match between both the foreground and background wells.

For example, you usually want to match wells from the same FCSAnalysis Run and from the sample draw.

▼
 and ▼
 and ▼
 and ▼

Background Column and Value

Specify the column and value filter(s) which uniquely identify the background wells from the foreground wells.

If multiple wells match the background criteria, the background value will be the average of all the matched wells.

For example, if your background wells may have either "neg" or "NegControl" for the "Peptide" keyword then select column "Keyword Peptide", select operator "Equals One Of", and set the value to "neg;NegControl". Multiple values are combined with ';' when using the "Equals One Of" operator.

Background Column	Operator	Value
<input type="text" value="Keyword TUBE NAME"/> ▼	<input type="text" value="Contains"/> ▼	<input type="text" value="FMO"/>

Study: reports

- Table format
 - Any variable that is a measure
 - No graphs
- Very accessible for general LabKey user
- Multi-patient or cohort view

Study: standard graphing feature

Advantages

- Fast and easy creation
- Multidisciplinary data integration
- Can choose multiple measures
- Available to many users without the need for graphing software

Disadvantages

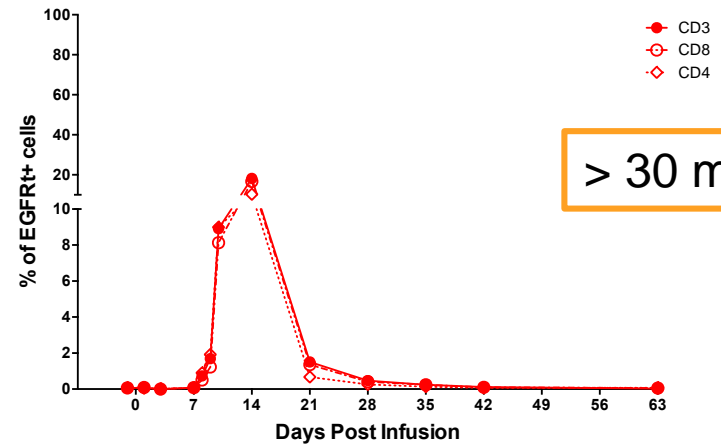

- Not as customizable as graphing softwares
- Not ideal for publications
- Time-consuming to find measures

Study: flow graphs

Graph depicting our modified T cell expression over:
All CD3+, CD3+/CD8+ and CD3+/CD4+ cells

Classical workflow:

- Export data from FlowJo to excel
- Organize excel sheet
- Copy/paste data into Prism
- Modify graph

> 30 minutes

Using LabKey:

- New Time Chart
- Choose measure(s)
- Modify graph

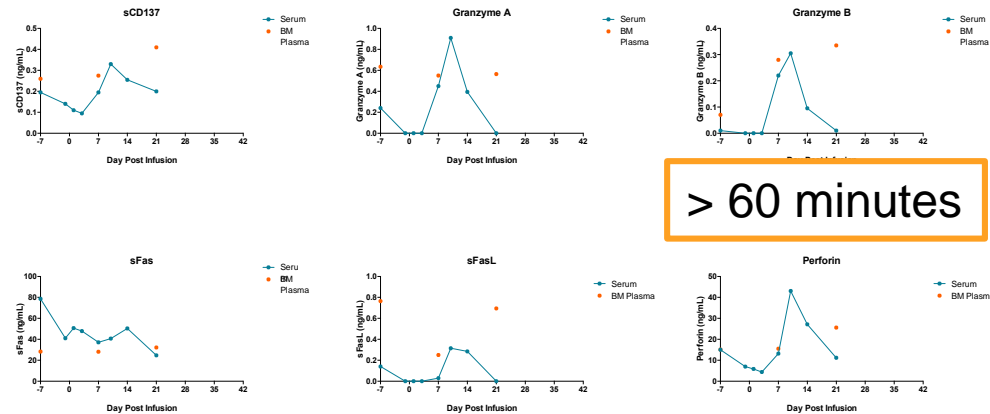

< 60 seconds

Study: luminex graphs

Luminex data: Multiple analyte view

Classical workflow:

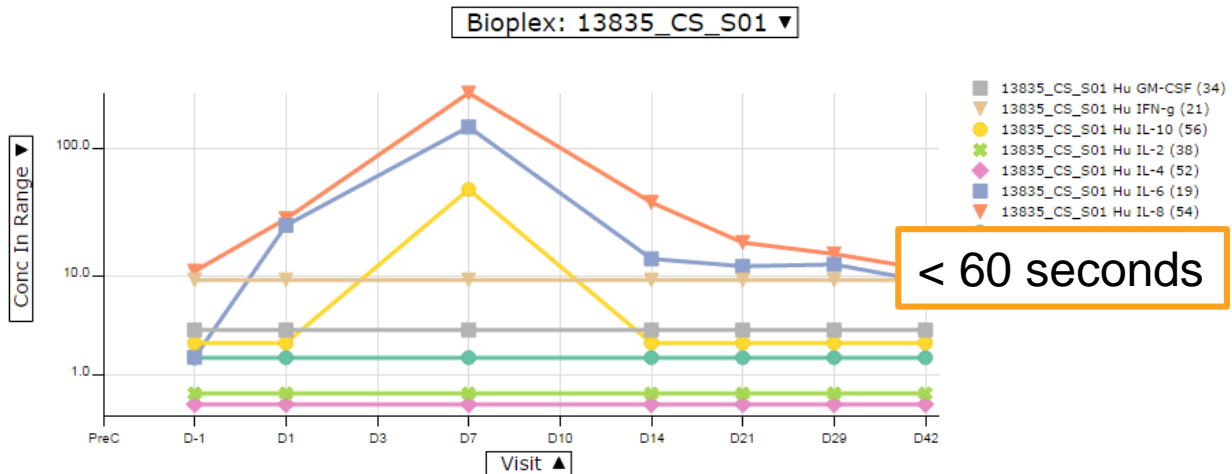

- Transfer data from luminex excel to working spreadsheet
- Organize excel sheet
- Copy/paste data into Prism
- Modify graph(s)

> 60 minutes

Using LabKey:

- New Time Chart
- Choose measure(s)
- Modify graph

< 60 seconds

Study: integrated graphs

CRF data

Patient temperature

Assay data

Luminex analytes

Graphs

Temperature and cytokines spike concurrently:
indicative of cytokine release syndrome

Study: integrated graphs

CRF data

Assay data

Flow panel 1:
Modified T cells

Flow panel 2:
B cells

Graphs

As T cells increase, B cells are depleted: Our modified T cells are capable of killing tumor cells

Outline

- Our T cell immunotherapy trials
- Merging cross-laboratory data into LabKey
- **Looking back and moving forward**

What we've learned

- Design data with LabKey in mind
 - Keywords
 - Data collection and storage
- Simpler system \neq no quality control
- Out-of-the-box does not mean ready to use
- You get out what you put in

Goals

- Import data from Trial 2
- Create surveys for pre- and post-clinical data
- Write SQL queries to customize tables
- Create user-friendly space
 - Readily accessible and available data summaries
 - Enhance data sharing
- Make report generation easy
 - Milestones, FDA reports, etc.

Thank you!
